# Damage Detection in a RC Bridge Based on Dynamic Measurements

Издательство DEStech Publications, Lancaster, 2010 год

6 стр; формат: 23,5 x 16 см; библиографический список: 10 единиц  
ISBN: 978-1-60595-024-2

This paper presents the results of a series of harmonically forced tests carried out on an existing reinforced concrete single-span bridge under increasing levels of damage. Variation of the modal parameters are documented and discussed. Changes in modal curvature of lower modes are used to locate the damage.
